Product Description

Glass Touch Switch GEN5 (1 Button)

The TPS411 GEN 5 by MCO Home is a wall switch with integrated switch relay and scene control. The relay can be controlled both with the touch switch, which is integrated into the glass surface, and via Z-Wave commands. The relay can switch a load with up to 1,100 watts. Beside local switching the device can be used to control two groups of directly associated devices. A blue LED on every button indicates the switching status.

The wall switch can be easily connected to an electrical load without installing a flush mounted module separately. The relay is located inside a module which is directly connected to the glass touch button. With that MCO Home wall switch you can replace any switch insert or toggle switch. The wall switch can be mounted on any flush box. With the stylish glass wall switches by MCO Home you can easily integrate your already installed lights into your home automation network. Without installing any new cables, you can switch your lighting as usual via wall switch – but thanks to Z-Wave technology also via remote control, smartphone or sensor-controlled automation. With the new function of the scene control now you are able to start your configured scenes with only one touch.

Features:

- Wall switch with integrated relay and scene control
- Stylish glass touch switch (one button)
- Ready-to-fit, incl. glass frame
- Replaces complete wall switch
- Relay with up to 1,100W / 230VAC
- Integrated status LED
- Enables Associations
- For 3-wire systems, neutral needed
- Wireless technology: Z-Wave Plus
