RTMX-MGBOX - Turris MOX G (Super Extension)

38,22 EUR

Item no.: RTMX-MGBOX
shipping weight: 0.10 kg
Manufacturer: Turris Omnia

Product Description

Turris MOX G (Super Extension)

The Turris MOX is a unique modular router suitable for small and medium enterprises, geeks and the households of all users who are aware of the internet's risks. Thanks to its secure default configuration, automatic firmware updates and adaptive distributed firewall, the product is very secure. The Turris MOX is also open source – it runs a free Linux operating system (based on OpenWrt) on open hardware. You can buy a Turris MOX as a complete set (Pocket Wi-Fi, Power Wi-Fi and Classic) or build your own. For that you will need the basic set MOX Start which you can expand with one or more modules (MOX B, C, D, E, F and G) and add-ons (MOX Wi-Fi add-on (SDIO), MOX Wi-Fi add-on (mPCIe) and MOX PoE add-on). [Key characteristics of the MOX G \(Super Extension\) module](#)

The MOX G module with a mPCIe slot allows you to connect a compatible Wi-Fi card to achieve significantly higher speeds than SDIO (we recommend the original mPCIe MOX Wi-Fi add-on). It also has a SIM card slot for users who are considering an mPCIe LTE modem. [Compatibility](#)

MOX G has the same features as MOX B and additionally a pass-through PCIe bus, which means that it can be used to connect two mPCIe cards to a single set. This module can be used only as an extension in a set. You will need at least MOX Start. If you're combining it with other modules, make sure they are compatible.

- Internal interfaces: 1x 64 pin connector for connection additional modules; 1x miniPCIe
- Size (W x D x H): 100 x 58 x 14 mm (without case)
- Operating temperature: 0°C to 40°C (40°F to 104°F)
- Relative humidity: 10% to 90% RH
- HW extensibility: Additional MOX modules due straddle mount PCIe 64 pin connector
