The Turrís MOX is a unique modular router suitable for small and medium enterprises, geeks and the households of all users who are aware of the internet's risks. Thanks to its secure default configuration, automatic firmware updates and adaptive distributed firewall, the product is very secure. The Turrís MOX is also open source – it runs a free Linux operating system (based on OpenWrt) on open hardware. You can buy a Turrís MOX as a complete set (Pocket Wi-Fi, Power Wi-Fi and Classic) or build your own. For that you will need the basic set MOX Start which you can expand with one or more modules (MOX B, C, D, E, F and G) and add-ons (MOX Wi-Fi add-on (SDIO), MOX Wi-Fi add-on (mPCIe) and MOX PoE add-on).
