Product Description

Aeotec Lasso Sensor für Water Sensor 6

The Aeotec Lasso Sensor is an innovative sensor that has no equal. The product is connected to the Aeotec Water Sensor Dock (AEOEZW160) and detects even the smallest amounts of water over its entire length. The Aeotec Lasso Sensor is suitable to cover whole areas and not only single points. This allows you, for example, to secure your washing machine over a large area by moving the Lasso Sensor from the connection point to underneath the washing machine. This protects you from potential water damage over a wide area.

Water damage can easily be avoided - with the Aeotec Water Sensor 6 (AEOEZW122), the Aeotec Water Sensor Dock (AEOEZW160) and the Aeotec Lasso Sensor.

- Long sensor for the detection of very small quantities of liquid
- Comprehensive detection possible
- Can only be used in combination with the Aeotec Water Sensor Dock
- Can be expanded several times and thus extended
- Length: 1.45m
