Product Description

RBGESP - Gigabit Ethernet surge protector in IP68 waterproof enclosure

You can't buy safety, but you can buy an RBGESP surge protector and keep your setup safe. RBGESP is Gigabit Ethernet Surge Protector that can be used to protect the network from lightning or surge damages.

Here's what a typical use-case would be like. You have a mast with some antennas. And some switches on the ground. Put the GESP surge protectors on each end. They come sealed inside a new and improved IP68 weatherproof enclosure. Your antennas are now safe during a lightning storm.

Don't forget about the grounding wire! Secure it to the rackmount, mast, or any other structure that is connected to the ground. For maximum protection, you should use a surge protector on both ends of long cables.

The GESP units can usually absorb multiple impacts, but make sure to check their condition after each surge. For attachment of GESP units, we recommend using PVC zip ties. Just don't make it too tight.

You know what they say – hope for the best, prepare for the worst. This small investment can save you lots of time and money, so why risk it? Grab a GESP and put your mind at ease! Included parts

- K-73 fastening set
