## 2454 - DPI TFT Panel Kippah

from **21,21 EUR**

Item no.: 345775

shipping weight: 0.10 kg

Manufacturer: ADAFRUIT INDUSTRIES

### Product Description

#### DPI TFT Kippah

This Adafruit DPI Kippah has a TFT panel that connects to a Raspberry Pi via an HDMI decoder. With a little software configuration, what is normally sent through the HDMI port now appears on a small flat screen.

This Kippah does not have a touch screen. Tests have shown that it can be used with 5-inch and 7-inch displays at 800x480. The Kippah screen is described as "native". What does that mean? It means that it benefits from all the graphics acceleration capabilities and updates instantly, as is normally possible with an HDMI display.

Not included: TFT display, USB micro-B cable, FPC extension cable, Raspberry Pi.

LCD:

- Amorphous 5.0 inch TFT display, transmissive, normally white
- 800 (RGB) x 480 dot matrix
- Narrow contact edge
- LCD driver IC: 1x HX8264T and 1x HX8664B
- RGB interface
- Video signal interface: Parallel RGB or serial
