Product Description

Aeotec WallMote Quad - Remote Switch with 4 Buttons

The WallMote Quad by Aeotec is fixed 4-button wall switch and portable remote control which can be integrated in an existing Z-Wave network as secondary controller and will work as wireless control for devices and scenes as well. The Aeotec WallMote sends commands to the Z-Wave controller and also controls by that defined devices and scenes. Aeotec WallMote can trigger corresponding functions by one single click. Furthermore, it masters the so called sliding. This touch control system allows you to swipe with a single finger across the relevant area on the WallMote to dim the lights by intuition for instance. The battery powered touch switch comes with a magnet that enables keeping the device in the respective wall mount. In this way, WallMote becomes a wall switch. You also can take the device away and use it as a portable remote control.

Features:

- Wireless control 4 four touch areas (Buttons)
- Control of devices and scenes
- Slider function
- Vibration feedback while operation
- Integrated color LED display status
- Wireless Technology: Z-Wave Plus

Scope of Delivery:

- Touch wireless switch
- Wall mount
- Mounting material
