Manufacturer: Teltonika

📄 Product Description

TTJ - Temperature sensor for fleet management devices

One of the implemented features for fleet management devices is 1-wire data protocol, which enables the connection of temperature sensors. It is a perfect accessory for temperature monitoring.

TTJ is a solution for a fleet management tracker in the following cases:

- Thermostatic controls – maintain the temperature near a desired set point
- Thermally sensitive system – receive alerts when temperature enters or leaves pre-defined value
- Consumer products – be assured that goods which you are delivering will maintain high quality
