Manufacturer: ADAFRUIT INDUSTRIES

Product Description

3.2 inch resistive touchscreen PiTFT Plus

The resistive TFT-LCD touchscreens of the PiTFT Plus series were specially developed for easy mounting on a Raspberry Pi. They are optionally available with 3 screen sizes of 2.8, 3.2 and 3.5 inches.

These TFT LCD touchscreens work with the 2x20 connector, so they won't work with the very first original Pi, but will work with all later Pis. They use the Pi's high speed SPI interface and can be used as a console, X window port, or to view pictures or videos. You can also connect a separate HDMI display.

- Low energy consumption: suitable for battery-operated systems
- Function to remove "image sticking"
- CMOS compatible inputs
- One-chip solution for COG assembly
- 24-bit input image function
- Partial display mode
- Deep standby mode
- LCD with normal black / normal white
- Integrated internal OTP supply
