shipping weight: 0.10 kg
Manufacturer: Panorama Antennas

Product Description

DPXA-BC-DAB - Active AM/FM + DAB Splitter Unit

The DPXA-BC-DAB is an active splitter unit, allowing a single passive antenna to be used for both AM/FM and DAB radio functions.

Ideal for use with either Panoramas' specific broadcast antenna whip model KF-BC-B3-L or as part of a more complex covert/discreet antenna system, where it is necessary to retain the broadcast radio function.

The unit can be powered by 9-16 volts by phantom feed (via coax) from the broadcast radio or from a separate power feed. All antenna connectors are FAKRA type Z (male) enabling an easy interconnection between the antenna and the radio inputs. It is easy to install with the supplied adhesive pad and is CE approved.

Electrical Data

- Typical VSWR: ? 1.5:1
- Splitter type: AM/FM DAB amplified splitter

Mechanical Data

- Connector: FAKRA Z (m)
