from **108,52 EUR**

Item no.: 345201

shipping weight: 1.10 kg

Manufacturer: Gigaset Communications

Product Description

Gigaset DL780 Plus schwarz

The perfect all-round phone for at home: Convenience and maximum freedom of movement when making calls are not mutually exclusive: The Gigaset DL780 Plus combines the convenience of a desk phone with the flexibility of a handset. You can rely on a corded phone that has its permanent place in your home - at the same time you can be reached anywhere in the house with the handy mobile device. Both devices are perfectly coordinated with each other, so you can take a call while on the move and call back from the desk phone. Thanks to the synchronized call list, you are guaranteed not to miss anything, and your phone contacts can of course also be called up from both devices. The Gigaset DL780 Plus is the perfect all-round phone for your home.

Simply safe: A telephone with protective devices: What to do in the event of unwanted calls? With the Gigaset DL780 Plus, you decide when and with whom you speak: With the time-controlled call protection, you can mute your phone. Annoying callers can even be blocked completely. Senior citizens in particular are often harassed by telephone scammers - with call protection for up to 32 blocked numbers, they can no longer call through and cause uncertainty. Also helpful for senior citizens are the programmable direct dial keys for important numbers. But this function is also practical for children, not only in emergencies. The handset of this combi phone has two direct dial keys, the desk phone even four. This makes it much easier to reach your relatives, friends or neighbours. More precisely: at the touch of a button.

Simply bigger: The Gigaset DL780 Plus is easy to use: Large display or large keys? Both are best: the new combination phone from Gigaset combines ease of use and clear design. Both the desk phone and the handy handset impress with large and well-lit displays. Even in difficult lighting conditions, names and numbers are clearly recognisable, which is appreciated not only by people with impaired vision. Incoming calls are also clearly visible thanks to the flashing keys and the flashing light bar on the desk unit. You can adjust the contrast of the handset individually and activate the extra-large jumbo mode in the display. The keys on the Gigaset DL780 Plus are also large: they are clearly numbered, making it much easier to dial long numbers.

Simply clearer: A phone with first-class sound quality: Listen! The Gigaset DL780 Plus is also a hit acoustically. The first-class sound quality is convincing on both the desk phone and the mobile device. This makes telephoning a listening pleasure. You can adjust the volume of both speakers individually, and the desk phone has an additional amplifier function. This significantly increases the volume during an ongoing conversation, which is a great advantage, especially for senior citizens or people with hearing difficulties. The audio options are also appreciated in multigenerational households. For example, the ringtone volumes of both devices can be individually adjusted to the needs of the users. And should you be dependent on a hearing aid: Both units are of course hearing aid compatible.

Simply more convenient: The combination phone for all occasions: Two devices that feel like one? The Gigaset DL780 Plus is a desk phone and handset at the same time, but is as easy to operate as a single phone. It stores up to 99 contacts that can be accessed on both devices. Your call lists are also displayed synchronously, so you can see up to 25 incoming and missed calls on the respective displays. The synchronised call protection is also convenient: if you feel harassed, you can block the numbers of up to 32 callers. This way you will remain undisturbed in the future. Couldn't be more convenient? But of course: since the handset is already registered to the base of the desk set, you can start using your new telephone immediately: Simply unpack, plug in and make a call!

Simply more environmentally friendly: With ECO DECT technology, but without radiation: Reachability and distance do not have to be mutually exclusive: Thanks to the practical 2-in-1 combination of the new Gigaset DL780 Plus, you can be reached anywhere in your home with the handset. This ensures a range of up to 50 metres (indoors) or 300 metres (outdoors). Thanks to the proven and environmentally friendly ECO DECT technology, Gigaset has also been able to reduce the radio power, which adjusts depending on the distance between the handset and the base station. And it does so to exactly the level required for a stable connection: the shorter the distance to the base, the lower the radiation. In standby mode, the handset of the Gigaset DL780 Plus is even completely radiation-free.

- The two perfectly coordinated handsets work as a total combination and ensure maximum freedom of movement by connecting a corded phone at a fixed location and a flexible handset
- Amplifier function for extra loud and clear hearing
- Extra large and high-contrast displays and control panels for easy operation
- Large direct dial keys for fast communication (A-D on the desk phone / A-B on the handset)
- Plug & Play - very easy installation: unpack, plug in, make calls (handset registered ex works)

General features
