Product Description

JustBoom 24-bit DAC add-on board

The JustBoom DAC add-on board is a standalone high-resolution digital to analogue converter providing high-quality audio playback. JustBoom DAC is simple to use and requires no soldering with the mounting hardware provided and is a true plug and play device.

JustBoom DAC when connected to a set of powered speakers, headphones or an audio amplifier can create flawless, crystal-clear high-quality audio playback.

Also, by connecting JustBoom DAC with JustBoom Amp gives more amplification or more outputs to passive speakers.

- Full high-quality audio - 108 kHz/24 bit (uses 384 kHz/32 bit DAC chip but is limited due to the S/PDIF input)
- Includes S/PDIF input using either optical (TOSLINK) or electrical (RCA/coaxial) connections
- Includes both a DAC and headphone amplifier
- Line-level RCA and headphone amplified 3.5 mm jack outputs
- Plug and play compatibility for ease of use
- No soldering required
- Powered by the 5 V micro USB power supply - you probably already have one!
- Compatible with the JustBoom Amp
- Mounting hardware included
