Product Description

RMS Management Pack, 10 years

Teltonika Networks' Remote Management System (RMS) is an easy-to-use IoT platform that provides a smart way to manage your entire networked solution remotely, securely and reliably.

It is a powerful remote access and management solution that allows users to save time and operational costs, while being flexible and easy to use. With RMS, you can manage compatible Teltonika Networks routers and gateways, reach remote devices, take advantage of remote desktop access capabilities and configure secure VPN tunnels with just a few clicks.

To meet the needs of different user profiles, Teltonika offers different functionalities of RMS separately, so you can choose only what your business needs and save costs.

RMS Management Package

Full control and monitoring of your entire fleet of compatible Teltonika Networks routers and gateways is one of the key features offered by the Remote Management System (RMS). Besides ensuring the availability and security of your devices, RMS offers many features to save your time and costs while managing everything remotely - even without public IP!

- Provides access to RMS management services;
- Can be purchased for either five or ten years;
- You can freely choose and reassign the company to which your devices are assigned without losing the benefits of the package
- Licence is device bound
