LED GU10 Smart Bulb W1 Multicolour Wi-Fi

from **18,61 EUR**

Item no.: 358098
shipping weight: 0.50 kg
Manufacturer: Yeelight

Product Description

The smart bulb by YEELIGHT, the YEELIGHT LED GU10 Smart Bulb W1 Multicolour WLAN, can switch between 16 million colours as well as warm and cool white (from 2,700 K to 6,500 K), is dimmable and has a GU10 base. Adjust the light colour, brightness and colour according to your individual wishes. Thus, it makes it possible to create the right lighting for every occasion.

YEELIGHT belongs to the Xiaomi Ecosystem, so you can use both the YEELIGHT and the Xiaomi app. You can easily control the light via your smartphone with the YEELIGHT or Xiaomi app, or via voice command with Google, Alexa or SmartThings. You can also switch the lamp on and off in the conventional way via the light switch.

Using the dedicated app or the SmartThings app, you can set schedules to switch on and off automatically and link multiple lamps to control them simultaneously. The GU10 W1 lamp has a beam angle of 36° so that the light illuminates the entire room.

Control your YEELIGHT LED GU10 Smart Bulb W1 Multicolour WLAN at any time while on the move. Switch off the light from anywhere in case you forget to do so. Simulate presence while you are on holiday, for example.

Install the GU10 Smart Bulb W1 in three easy steps: twist the bulb into the socket, download the YEELIGHT app and add the bulb. Thanks to WLAN, you don't need a hub or gateway, just your WLAN network.

With a low power consumption of 8 watts and a long service life, this lamp is cost- and energy-saving.

High compatibility with various systems such as SmartThings, Homey, Amazon Alexa or Google Assistant enables multiple uses.

Features:
