Scalable Enterprise Wi-Fi Management

UniFi(R) is the revolutionary Wi-Fi system that combines enterprise performance, unlimited scalability, and a central management controller. UniFi 802.11AC DualRadio Access Points (APs) have a refined industrial design and can be easily installed using the included mounting hardware.

Easily accessible through any standard web browser, the UniFi Controller software is a powerful software engine ideal for highdensity client deployments requiring low latency and high uptime performance.

Use the UniFi Controller software to quickly configure and administer an enterprise WiFi network – no special training required. RF map and performance features, real-time status, automatic UAP device detection, and advanced security options are all seamlessly integrated. **Features** [Save money and save time](#)

Unlike traditional enterprise Wi-Fi systems that use a hardware controller, UniFi comes bundled with a non-dedicated software controller that can be deployed on an onsite PC, Mac, or Linux machine; in a private cloud; or using a public cloud service. **Powerful Hardware**
