Product Description

TP-Link TL-MR3020 - 3G/4G WLAN N router Product features

Share the freedom of 3G! The TL-MR3020 3G/3.75G Wireless N-Router allows users to share a 3G/3.75G mobile broadband connection with family and friends on the train, camping, in the hotel and just about anywhere in the 3G/3.75G coverage area. Connect a UMTS/HSPA/EVDO USB modem to a router and a Wi-Fi hotspot is set up in no time. Handy and flexible

What makes this model stand out is its "size" and its flexible mini-USB port, which allows you to operate it via a computer or the supplied adapter. This creates a Wi-Fi hotspot into which iPads(TM), iTouches(TM), Android(TM) phones, Kindles(TM) and many other portable Wi-Fi devices can log on. Field tests prove high compatibility

Compatibility is the most important aspect to consider when choosing a 3G router. To ensure the best possible compatibility between our routers and the modem you want to use with the router, TP-LINK has ensured that our 3G routers are compatible with the ISPs in the regions where they are sold. We have teams in place around the globe who are constantly testing our routers with the new modems coming onto the market to ensure that end users can rely on their routers to work smoothly where they live and work. Wi-Fi protection at the touch of a button

Compatible with Wi-Fi Protected Setup(TM) (WPS), the TL-MR3020 offers a Quick Security setup that lets you provide security in seconds by pressing the WPS button on the router, which automatically establishes a WPA2 connection that is much more secure than WEP. Not only is it faster than normal security setups, it's also more convenient as you don't need to remember a password. IP QoS - Control the bandwidth to your liking

The TL-MR3020 supports the IP-QoS function, which enables optimal use of bandwidth and provides bandwidth control when bottlenecks occur, preventing bandwidth misuse. In this way, users on a small network are allocated an assured, specific bandwidth, which prevents non-critical applications from affecting network performance. Ease of use

Even inexperienced users can easily set up their network products. The unit comes with a CD-ROM containing an Easy Setup Wizard that guides you step-by-step through the installation process and even helps you with WLAN settings and security configuration.

- Compatible with over 120 UMTS/HSPA/EVDO USB modems, field tested
- Mini design, ideal for taking along
- Wireless N speed up to 150 Mbps
- WLAN security encryption simply at the touch of a button (WPS compatible)
- IP-based bandwidth control gives administrators a quick overview of current network usage
- Operable via mini USB
- 3G/WAN failover for permanent Internet connection
- Operating modes: 3G router, AP, WISP client router
