### Product Description

With SmartLabel and Ambient Sensor for more productivity and energy efficiency in everyday lifeThe Snom D717 impresseswith a high-resolution colour display and the freely configurable Snom SmartLabel. A built-in ambient sensor ensures that the brightness of the phone display is always adapted to the current lighting conditions in the room. This is both energy-saving and convenient. The phone has 3 multi-coloured, self-labelling LED function keys and an integrated Gigabit switch. Furthermore, a wide range of accessories can be connected via the USB port.The Snom D717 is available in black or white. This means that the phone fits perfectly into any working environment, whether office or reception area.The Snom D717 combines the latest technology, best voice quality and clear design in one device - the Snom D717 thus promises entry into the world of professional VoIP telephony.Integrated ambient sensorThe sensor measures the ambient brightness in the room and regulates the brightness of the phone display according to your wishes. This is both energy-saving and convenient.High-resolution 2.7" TFT colour displayThe high-resolution display offers excellent presentation and visibility in all lighting conditions.Available in black and whiteThe black colour is ideal for use in classic office environments, while the white model is particularly popular in medical environments such as hospitals and doctors' surgeries.The white model is particularly popular in medical environments such as hospitals and doctors' surgeries, as well as in the wellness sector or other particularly design-oriented companies.Features- Colour: black- High-resolution TFT colour display- 3 freely programmable function keys (BLF)- Ambient sensor- USB port- Headset can be connected
