from **326,86 EUR**

Item no.: 386381

shipping weight: 0.40 kg

Manufacturer: Snom Technology GmbH

Product Description

The professional and modern base with DECT multi-cell technology. Thanks to its enormous scalability, the Snom M900 is basically the right base for almost any size of installation. Whether a small office with just one base or a hospital with several thousand handsets and hundreds of bases. Thanks to the DECT manager function integrated in every Snom M900 and the latest multi-cell technology, individual installations can include up to 1,000 bases and up to 4,000 handsets. The handy, white base not only offers a completely new design, but also a wide range of functions. In addition to an integrated DECT manager, the Snom M900 also offers DECT and LAN synchronisation. The integrated DECT manager manages all bases in one installation and ensures constant availability as well as the so-called "seamless handover", i.e. that calls are seamlessly transferred between the individual bases - even across floors or buildings. With the integrated TLS encryption, the base sets standards in terms of encryption, because security is naturally a top priority, especially in daily business communication. The devices can also be easily maintained via the Web UI of the Snom M900. Each base can send wireless software updates (OTA) as well as other configuration information to the connected handsets, thus massively simplifying the workload for the IT department. Features - Multicell with up to 1,000 bases in a network - Up to 4,000 handsets in a network - Wireless software updates for handsets - TLS encryption
