

Item no.: 390034

DKS12 - TWIN single cable conversion: 1xDKS1 1xDKS2

from **188,45 EUR**

Item no.: 390034
shipping weight: 0.30 kg
Manufacturer: Televes

Product Description

The system consists of two components: DKS1 and DKS2. DKS1 has two inputs and one output. Input 1 allows the frequency range 5-2150 MHz to pass through, while input 2 shifts the frequency range 950-2150 MHz upwards by 1400 MHz, so that input signals in the frequency range 5-3550 MHz are transmitted to the output via a coaxial cable. The DKS2 receives the signals and splits the frequency from 5-2150 MHz to output 1 and converts the frequency from 2350-3550 MHz back to the frequency 950-2150 MHz, which is then available at output 2. Highlights- Quick and easy installation- Small space requirement Features- F connections- Compatible with twin, quad, quatro LNBS and multi-switches- With the SK2000plus coaxial cable, the cable length for operating receivers must not exceed 60 metres- Please note that no component (e.g. distributor or antenna socket) may be installed between DKS1 and DKS2
