from **307,70 EUR**

Item no.: 388263
shipping weight: 4.50 kg
Manufacturer: Yale

Product Description

With the Yale smart home security camera sets, you never have to worry about the security of your home again - no matter where you are. Crystal clear live images around the clock, even at night or in bad weather, and push notifications when people or vehicles are detected via the Yale View app. Thanks to the customisable detection function, you can monitor selected areas of your home and receive notifications as soon as motion is detected, so you always know what's going on. If something is detected, the cameras start recording so that you can watch it again in the app. Optimum protection in full HD resolution. The surveillance camera set provides optimum protection in crystal-clear full HD resolution around the clock - even in the dark and in bad weather, of course. View the recordings stored locally on the recorder or the live view from a connected monitor or via the free Yale View app - from anywhere in the world. You can use the app to receive intelligent push notifications at any time about detected movements on your property. So you always know what's happening at home. Withstands all weathers! The cameras are ideally suited for outdoor use in accordance with IP67 and can withstand all weathers - whether rain, sun or snow. Even in the dark, the cameras still deliver high-resolution and crystal-clear recordings thanks to 20 metres of night vision, so that your property is optimally protected around the clock and even in poor weather conditions. Intelligent vehicle and face detection. The CCTV surveillance set has innovative detection functions that help you to recognise the really important events. Smart motion & vehicle detection. As soon as a movement is detected, the system automatically identifies whether it is a person, a vehicle or a movement of other objects thanks to artificial intelligence. This eliminates annoying false alarms that are triggered by moving trees or bushes in the wind, for example, when using the usual detection function. Face recognition. The system is even able to recognise faces previously stored in the database. This makes alerting much more reliable and the subsequent analysis of events in the timeline much more convenient. Features:- Camera resolution: Full HD 1080P- Protection class: IP67- Number of cameras: 2 (expandable)- Number of recorders: 1- App: Yale View App - In-app control - Full control via your smartphone.- Live view - Access the live images from your cameras at any time.- Motion detection - Receive notifications and alerts.
