UQQA-S2-T - T-0X - TWIN - Converted DVB-S2 to QAM

from **636,58 EUR**

Item no.: 390083
shipping weight: 1.20 kg
Manufacturer: Televes

📄 Product Description

Transmission module that generates two QAM (DVB-C) multiplexes from the services of a TV-SAT transponder or two transponders of the same band and the same polarisation.Highlights- Complete or selective removal of individual services so that they are not unintentionally recognised (and stored) by the receivers (STB)- Adjacent channel capability- Supports LCN (Logical Channel Numbering) for individual channel sequencing to simplify the receiver scan- Programme filtering required to adapt to the maximum output data rate. Information about the utilisation of the output signal.- Programmable with CDC handheld programmer- Monitoring and signal status display via LEDsFeatures- Insertion of zero packets ("stuffing") enables the receiver (STB) to scan more quickly- S_ID editable to prevent the receivers (STB) from the receivers (STB) in a system from having to perform a new transmitter scan when changing the output multiplex services- PID filtering enables the removal of unwanted services within a multiplex (extended occupancy utilisation)- Editable Network_ID and Original Network_ID enable the control of network identifiers
