shipping weight: 0.00 kg
Manufacturer: Televes

Product Description

Network management platform based on the FCAPS model (Fault, Configuration, Accounting, Performance and Security). To facilitate the monitoring of the network infrastructure, including all necessary functions to provide a complete overview of the network infrastructure regardless of the underlying technology. Art.NrHighlights- Efficient commissioning and management. Reduces deployment time and the risk of human error by automating the configuration process. Allows full element setup, eliminating the need to configure elements individually- High scalability. It can be used in both simple and complex networks and can monitor many different elements. New elements can be gradually added to the monitoring tool- Network status monitoring service that can anticipate possible problems (preventive maintenance)- Complete (all elements at once) configuration of GPON network elements based on scripts and CSV files. To modify the configuration of Wi-Fi, SIP extensions, etc.- Detection of all elements connected to the network that can be registered in the FMT, classification according to their function and visualisation in a network diagram so that their monitoring can begin- Extraction of data relating to the value of the various elements of the hospitality architecture- Active monitoring of all network elements, periodically checking the different pieces of equipment and services- Periodically reporting on the evolution of network performance over a given period and storing the logs- Backing up the configuration for all the equipment. The FMT contains a database with all the elements of the network- Planning updates and configuration of the elements of the GPON network
